# Fundraiser for the Alzheimer's Society

Alzheimer's disease (AD), also called Alzheimer disease, Senile Dementia of the Alzheimer Type (SDAT) or simply Alzheimer's, is the most common form of dementia.

This incurable, degenerative, and terminal disease was first described by German psychiatrist and neuropathologist Alois Alzheimer in 1906 and was named after him.

Generally, it is diagnosed in people over 65 years of age, although the less-prevalent early-onset Alzheimer's can occur much earlier.

In 2006, there were 26.6 million sufferers worldwide. Alzheimers is predicted to affect 1 in 85 people globally by 2050
